2 Technical characteristics of the Port

This chapter contains a physical description of the Port of Barcelona; its geographic location and climatic conditions, its land accesses, the location of lighthouses and beacons which facilitate maritime access, the distribution by use of the port's 828.9 ha of land (including the ZAL) and the draught along the more than 20 km of wharves.

Finally, this chapter contains an inventory of the facilities and equipment in the Port.

INTRODUCTION

2.1. General conditions

2.1.1. Location

2.1.2. Wind pattern

2.1.3. Deep-water or theoretical storm pattern

2.1.4. Tides

2.1.5. Entrance

2.1.5.1. Access channel

2.1.5.1. bis Map of access channels and anchorage areas

2.1.5.2. Entrance mouth

2.1.5.3. Use of tugs for vessels entering and departing

2.1.5.4. Largest vessel entered in the last five years

2.1.6. Flotation areas (Ha)

2.1.6.1. Zone 1

2.1.6.2. Zone 2

2.2. Facilities for maritime trade

2.2.1. Wharves and berths

2.2.1.1. Classification by basin

2.2.1.2. Classification by use and draught

2.2.2. Land area and storage facility areas (m2)

2.2.3. Refrigerated warehouses and ice factories

2.2.4. Passenger terminals

2.2.5. Fishing facilities

2.2.6. Buildings and facilities for public use

2.4. Ships' facilities

2.4.1. Seawalls

2.4.1.1. Dry docks

2.4.1.2. Floating docks

2.4.2. Slipways

2.4.3. Shipyards

2.4.4. Ships' supply service

2.5. Dockside cargo-handling equipment

2.5.1. Cranes

2.5.1.1. Dock cranes

2.5.1.2. Mobile cranes

2.5.1.3. Number of cranes. Summary

2.5.2. Special loading and unloading facilities

2.5.3. Rolling stock

2.5.4. Auxiliary loading, discharge and transport equipment

2.6. Floating equipment

2.6.1. Dredgers

2.6.2. Tugboats

2.6.3. Sludge lighters, lighters and barges

2.6.4. Floating cranes

2.6.5. Other auxiliary service equipment

2.7. Land accesses and communications

2.7.1. Land accesses and internal communications

2.7.2. Map of internal communications

2.7.3. Map of land accesses

2.8. Brief description of facilities for specific traffic types

2.9. General map of lights and beacons

2.10. General map of Port

2 Technical characteristics of the Port

2.1. General conditions

2.1.1. Location

Longitude	2° 10' E
Latitude	41° 21' N

2.1.2. Wind pattern

Prevailing	3rd Quadrant
Dominant	1st. Quadrant

2.1.3. Deep-water or theoretical storm pattern

Length	300'
Maximum wave height (2h = Hs)	5
Maximum wave length (2L)	207
Significant wave	2,5

2.1.4. Tides

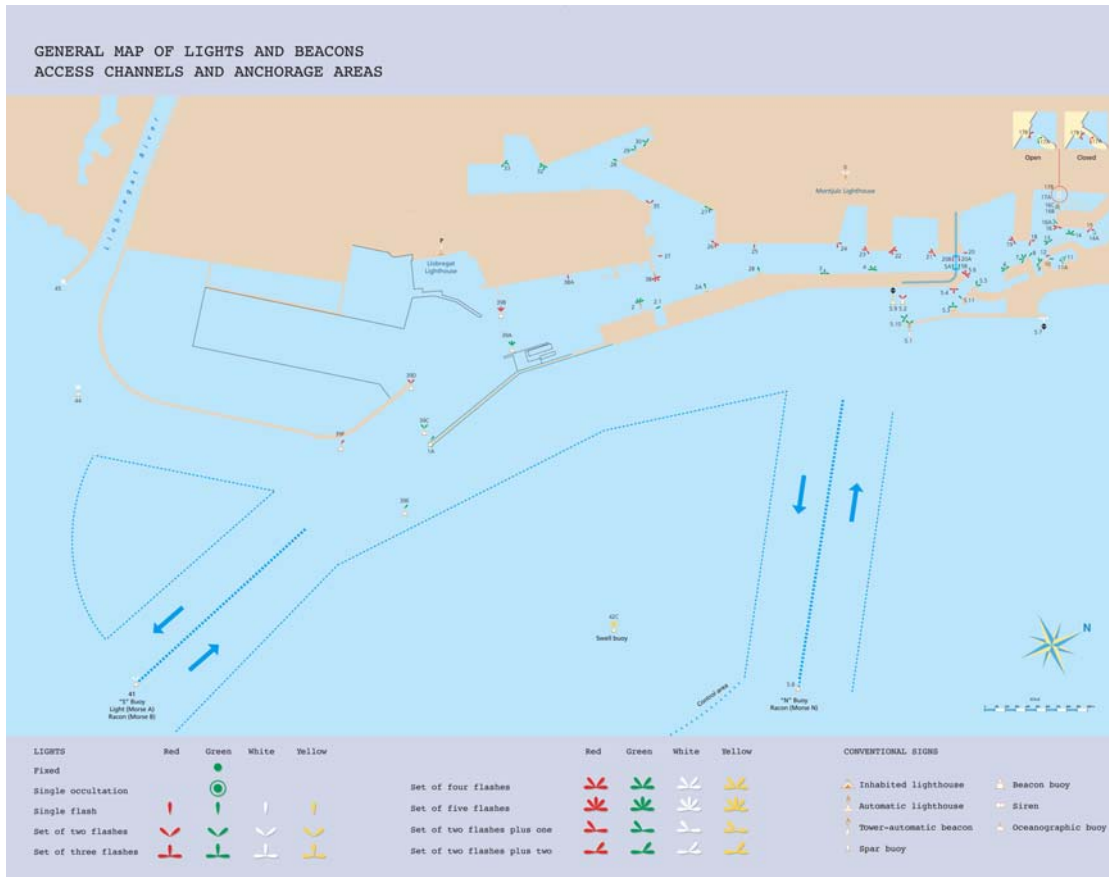

Maximum tidal range	125 cm
Height of LLW with respect to port zero mark	-5 cm
Height of HHW with respect to port zero mark	120 cm

2.1.5. Entrance

2.1.5.1. Access channel

North entrance channel	
Position	125° / 305° v
Width	0.5'
Longitude	1.5'
Water depth in LLW	30 m
Sea bottom characteristics	mud
South entrance channel	
Position	166° / 346° v
Width	from 0.5' to 0.6'
Longitude	1.2'
Water depth in LLW	50 m
Sea bottom characteristics	mud

2.1.5.1. bis Map of access chanel and anchorage areas

2.1.5.2. Entrance mouth

North entrance mouth	
Position	015° / 195° v
Width	0.2'
Water depth in LLW	11.50 m
Maximum recorded current	1 cm/sec

South entrance mouth (works underway)	
Position	166° / 346° v
Width	0.28'
Water depth in LLW	18.5 m
Maximum recorded current	8 cm/sec

NB: The enlargement of the port of Barcelona to the south has created a channel between the current South entrance mouth and the access channel marked with beacons to indicate the navigable waters delimiting the filling works for the port's future breakwaters.

2.1.5.3. Use of tugs for vessels entering and departing

2.1.5. Entrances

2.1.5.4. Largest vessel entered in the last five years

Characteristics	Greatest length		Greatest depth at water level	
	Zone 1	Zone 2	Zone 1	Zone 2

2.7. Land accesses and communications

2.7.1. Land accesses and internal communications

Internal communications

Road

A 13km. long ring road connects the different wharves and storage areas around the perimeter of the Port of Barcelona. This road has two lanes in each direction around most of its length.

Apart from the peripheral ring network there are also access and service lanes to each wharf, but they are secondary to the main ring road described above.

Railway

Internal rail communications. From the Ponent wharf to the south, all the wharves have rail access, either with Renfe gauge (1.668 m), or with the gauge of the Ferrocarrils de la Generalitat de Catalunya (1m) or a mixed variety.

The Port's rail network is 33.475 km long, 15.45 km of which are Iberian gauge, 5 km of the gauge employed by the Ferrocarrils de la Generalitat de Catalunya and 4.700 km of mixed gauge (Iberian-Ferrocarrils de la Generalitat de Catalunya) and 3.63 km of mixed gauge (Iberian-European).

Renfe serves many different types of traffic: containers, non-containerised general cargo, solid and liquid bulks.

The Ferrocarrils de la Generalitat serve the flow of potash that is embarked in Barcelona from the Contradic wharf.

The Sud wharf is equipped with a container rail terminal.

The automobile terminals each have their own rail terminal for cars.

The Príncipe d'Espanya wharf has a public multipurpose rail terminal mainly dedicated to cars, metal products and containers.

Land accesses

Given that the ringroads that girth the city of Barcelona pass very close to the port, access to the road network is immediate.

The main roads are:

- The AP-2 motorway, which links up with the centre of the country, Aragon and the A-68 motorway to the north of Spain and the
- The AP-7 motorway, which links up to the south with the east coast and centre of Spain and to the north, with the French border and the European motorway network.

- The AP9 motorway, which links to the AP-7 at the French border via la Jonquera.
- The C-32 motorway, which links up with the south and east of the country.
- The C-58 motorway running to Sabadell, Terrassa and Manresa, which links up to the Llobregat axis and through the Cadí tunnel to France via Puigcerdà and the Pimorent tunnel.

- The C-31 motorway, which links up with the N II main road to the French border.
- The N II, to the west, centre and north of the country.
- The N C-17, with the French border via Puigcerdà.
- The N 150, to Sabadell, Terrassa and Manresa.
- The N 340, which links up to the south and east of the country.

Railway

The following railways link the port and its surround area with the rest of the country:

Renfe (Iberian gauge)

- To Portbou via Mataró and Granollers
- To Puigcerdà (France)
- To the centre, west and the north of the country via: Manresa-Lleida, Sant Vicenç-Lleida, Tarragona-Saragossa
- To the west, south and East coast via: Tarragona-Valencia

Ferrocarrils de la Generalitat de Catalunya

- To Manresa, Súria and Berga (metric gauge)
- To Igualada (metric gauge)
- To Sabadell and Terrassa

2.7.2. Map of internal communications

2.7.3. Map of land accesses

2.8. Brief description of facilities for specific traffic types

Containers and general cargo terminals

Loading for external navigation

In the 24 Sud Wharf is the public container terminal, which is a concession granted to TCB, SL. It covers an area of 46.1 hectares and has two berthing lines, one on the north face 350 m long and with a 12 m draught and another on the east face 1,012 m long with a draught of between 14 and 16 m. This terminal has 9 container lifting cranes, 5 of which are of the post-panamax type.

On 29 Príncipe d'Espanya wharf, the Terminal Catalunya, SA firm holds the concession for a multi-purpose terminal covering an area of 35.1 hectares, a berthing line of 1,653 m and a draught of between 8.7 and 14 m. The terminal has 2 ro-ro ramps and an area of 22,145 m² of covered warehouses. Likewise, the company owns 8 container lifting cranes, all of the post-panamax type.

On 01 Adossat and 20 Ponent - 21 Costa wharves, there are two multipurpose terminals run by UTE Unió Term. Est. LLEVANT T.M. Alcludia and Terminal Port-Nou, SA, respectively. Together, these terminals occupy an area of 15 has, with a draught of up to 16 m and a berthing line of 2,150 m. All in all, they have 7 ro-ro ramps and a covered warehouse area of 19,442 m². The UTE has 3 container lifting cranes and Terminal Port-Nou, SA and has another on the southern part of the Ponent Wharf.

Cargo in coastal shipping mode

Estibadora de Ponent, SA has two areas on 26 Álvarez de la Campa and 27 Lepant wharves (berths No. 2 and 3) for handling containers. This facility has two authorised areas, of 53,180 m² and 48,405 m² respectively, with draughts of between 6.5 m and 11.8 m and a berthing line of 870 m with three Ro-ro berths. It also has 1 28 Tn gantry crane and 4 container lifting cranes of 33.5 to 41 Tn. Apart from coastal traffic, this terminal also handles exterior traffic starting and ending in North Africa.

On 19 Sant Bertran wharf Trasmediterránea SA has an area under concession of 34,995 m² for handling ro-ro traffic.

Automobile terminals

On 30 Dàrsena Sud and 31 Dàrsena Interior wharves there are the two automobile terminals: Autoterminal, SA and Setram SA. These wharves have a berthing line of 850 m, with a maximum draught of 12 m and four ro-ro berths.

Autoterminal has an area under concession of 29.2 Ha, with 3 multi-storey car storage areas, which has allowed it to increase its storage capacity by 299,340 m². The terminal has a capacity of 44,400 vehicles, of which 21,500 correspond to covered places and the remaining 22,900 in the open air. The terminal also has a vehicle personalisation centre and a protection-removing tunnel.

Setram operates an area under concession of 8.7 Ha and has a multi-storey parking area, which it shares with Autoterminal. This has allowed it to increase its storage area by 88,700 m². The terminal has a capacity for 10,000 vehicles, of which 4,000 correspond to covered places.

Bulk grain and seed terminal

22B Contradic Est wharf is home to the Ergransa terminal, specialised in the reception of bulk grains and seeds. It has multicellular silos with a capacity for up to 170,000 Tn. At the terminal there is a pneumatic discharge operational capacity of 900 Tn/h

Terminals for milling soya beans

26B Álvarez de la Campa and 22B Contradic West wharves are home to Cargill España, SA and Bunge Ibérica, SA (formerly Moyresa), specialised in the traffic of soybeans. They have milling plants with a capacity of 1,400,000 Tn.

Bulk cement reception and loading terminal

On 22C Contradic, 26B Álvarez de la Campa and 01 Adossat wharves are the cement terminals, Portcemen SA and CEMEX SA. These terminals have silos with a storage capacity of 104,800 Tn.

Potash loading terminal

On 22A Contradic Nord wharf we can find Tramer SA, a terminal dedicated to the loading of potash. It has a maximum storage capacity of 80,000 Tn and is equipped with two gantry cranes with a capacity of between 700 and 700 Tn/hour.

Terminals for the loading, unloading and storage of liquids and liquefied gases

The Port of Barcelona houses the following specialised terminals in this segment of transit: Enagas, SA (natural gas), Relisa (oils), Tepsa (chemicals and refined petroleum), Terquimsa (liquid chemicals), Decal (refined petroleum), Meroil (refined petroleum), Sadesa (oils), Loiret & Haëntjens Esp., SA (molasses) and CLH, SA (refined petroleum). These terminals are located on 32 Inflammables, 22 Contradic wharves and on stretch 4 of the port Ringroad (circumval·lació). They occupy an area of 61.5 has with an exclusive berthing line of 2,390 2.390 m and have a draught of up to 12 m. Total storage capacity is 2,232,000 m³.

Fruit terminal

20C Ponent wharf houses the Terminal Port Nou, SA fruit terminal. It has 5,556 m² of refrigerated warehouse space, with three independent temperature controls, simultaneous storage of up to 6,000 pallets, computerised bar code control system and a loading platform that can accommodate up to 150 lorries per day.

Coffee and cocoa terminal

On 11,000 Álvarez de la Campa wharf is the BIT SA terminal. It covers an area of 11,000 m² and has a storage capacity for coffee and cocoa of 14,000 Tn. The terminal is under duty-free control and is type-approved by the LIFFE (London International Financial Futures and Options Exchange), necessary for the delivery and auctioning of coffee.

Non-ferrous metals terminal

29 Príncep d'Espanya wharf is home to the Barcelona Metals, SA non-ferrous metals terminal, specialised in the handling, storage and distribution of metals and their alloys: aluminium, copper, nickel, lead, tin and zinc. The terminal has been type approved by the London Metals Exchange (LME).

Cold storage facility

19 Sant Bertran Wharf houses Interlogística del Frió. The terminal has a cold storage facility for storing perishable products on a site covering 7,973 m² with 75,000 m³ capacity cold stores. It also has a freezing tunnel and is type approved for intra-Community storage.

2.9. General map of lighthouses and beacons

2.10. General map of Port

3 Authorised private-sector construction works and activities

Although the land itself is owned by the public sector, most of this is leased out through a number of legal deeds to private companies, which render port services. This chapter first contains a list of all the spaces, organised by wharf, which were leased out to private companies before the onset of 2007, with specific details as to size, functional use, the date on which authorisation was granted and the levy paid to the Barcelona Port Authority.

Following that there is a list of all the construction works and activities authorised in 2007.

INTRODUCTION

3.1. Authorised before 2007 and currently in force

3.2. Authorised in 2007

3 Authorised private-sector construction works and activities

4 Traffic statistics

This chapter contains an extensive description of the traffic of the Port of Barcelona. These statistics show movements of passengers, number of ships that have entered the port - classified according to size, flag and type - and the goods traffic in 2007. Note that point 4.7 contains specific information on containerised traffic and point 4.8 provides a summary of all of the traffic in the Port of Barcelona.

INTRODUCTION

4.1. Passenger statistics

4.1.1. Passengers

4.1.1.1. Number of passengers

4.1.1.2. Number of passengers on regular lines. Ports of origin y destination

4.1.2. Passenger vehicles. Number of units

4.2. Ships

4.2.1. Merchant vessels

4.2.1.1. Distribution by tonnage

4.2.1.2. Distribution by flags

4.2.1.3. Distribution type of vessel

4.2.2. Warships

4.2.3. Fishing vessels

4.2.4. Pleasure craft

4.2.5. Vessels entered for breaking

4.2.6. Other craft

4.3. Cargo, in tonnes

4.3.1. Handled by wharves and service berths

4.3.2. Handled on private wharves and berths

4.3.3. Unloaded and loaded during the year

4.3.4. Total cargo by nationality of ports of origin and destination

4.3.5. Transshipped cargo

4.3.6. Roll-on / Roll-off traffic

4.3.6.1 Summary of roll-on/roll-off traffic

4.3.6.2 Units of roll-on/roll-off intermodal (UTI) transport

4.3.6.3 Units of vehicles in cargo regime

4.3.7. Classification of cargo

4.3.7.1 Classification by type

4.3.7.2 Classification by type and presentation

4.3.7.3 Classification of goods in transit by type

4.3.7.4 Classification of goods by NST-2000

4.4. Local or river traffic, in tonnes

4.5. Ship supplies

4.6. Fish catches

4.7. Container traffic

4.7.1. 20-foot containers

4.7.2. Containers over 20 foot

4.7.3. Total containers of 20 foot and over

- 4.7.4. Total containers of 20 foot and over in transit**
- 4.7.5. Total 20 foot equivalent containers (TEUS)**
- 4.7.6. 20 foot equivalent containers (TEUS) in transit**
- 4.7.7. Goods transported in containers classified by type, in tonnes**

4.8. General summary of maritime traffic

4.8.1. General table number 1

4.8.2. General table number 2 (Including local traffic, supplies and fishing)

4.8.3. General table number 3

4.9. Land traffic

4 Traffic statistics

4.1. Passenger statistics

4.1.1. Passengers

4.1.1.1. Number of passengers

		Coastal shipping	External	Total	Internal
REGULAR LINE	Embarked	401,531	153,025	554,556

5 Use of the Port

This chapter describes the activity at the Port of Barcelona during 2007 from a different perspective from that of the previous chapter. It offers data on the use of the many Port facilities, including the cargo loaded and unloaded on each wharf, the number of vessels entering dry dock and their tonnage, and the sum of the lengths of all vessels berthing at the Port in 2007.

INTRODUCTION

- 5.1. Use of wharves (t)**
- 5.2. Basins**
- 5.3. Pointed mooring**
- 5.4. Berths**
- 5.5. Area utilisation (t/day)**
- 5.6. Mechanical shore equipment.**
 - 5.6.1. Cranes**
- 5.7. Conveyor trucks**
- 5.8. Conveyor belts**
- 5.9. Mechanical shovels**
- 5.10. Railways shunting, locomotives**
- 5.11. Wagons**
- 5.12. Trucks**
- 5.13. Weighbridges**
- 5.14. Floating cranes**
- 5.15. Tugboats**
- 5.16. Slipways**
- 5.17. Description of terminals and wharfs**
- 5.18. Floating dock**
- 5.19. Barges**
- 5.20. Dry dock**

5 Use of the Port

6 Construction works

This chapter includes the investments in construction works that were partially or completely executed in 2007 by the Barcelona Port Authority. A description of the main projects is included.

The enlargement works of the Port of Barcelona have been co-financed by the European Union Cohesion Fund

INTRODUCTION

6.1. Works in progress or completed during the year

6.2. Brief description of the most important works

6.2. Brief description of the most important works

Order	PPE	APB	Title
1	PBN1A3025E001	OB-GP-P-0345/1999	SHEET PILE WHARF IN ALVAREZ DE LA CAMPA WHARF
<p>The reorganisation in areas under lease that has occurred over the last two years in the Alvarez de la Campa wharf has created the need to improve the berthing line of the wharf in order to adapt it to efficient port operation. In view of the precarious situation of the wharfside (modules 14, 15, 16 and 17 are out of order) and the different draughts in this berth, it has become necessary to build a new wharf with a uniform draught to allow port operations.</p> <p>The works on the sheetpile wharf in Alvarez de la Campa wharf involved the building of 450 m. of sheetpile wharf, extending the current structure by 1.5 m. and unifying the draught of the entire wharf to -12 m. It also included the building of a track for the Panamax crane to run right along the wharf.</p>			
2	PBN1C9002E001	OB-GP-P-0371/2001	PORT CONTROL TOWER
<p>A whole series of factors point to the advisability of setting up a port centre for traffic control and the coordination of vessel services. First of all, the increasingly complex nature of port traffic, due to a number of factors, such as continually increasing traffic or the opening of the second entrance mouth - which will provide two access channels to the port -, or the future enlargement works, which will significantly increase the length of the berthing lines and the water areas (area 1, anchorage areas, ...).</p> <p>Secondly, the building currently occupied by the pilots is in a precarious state, and is also affected by phase two of the enlargement of the Adossat wharf and the new uses planned for it, which means that the pilots need to be found new premises.</p> <p>This involved building the control and watch tower of the Port of Barcelona with an annex for the Pilots' Corporation and seafarers and the building of a parking area for 70 vehicles. The tower is 45 m tall with 7 storeys, of which only the top three have been fitted out for control and port navigation purposes. The tower is built of metal and the adjoining building of concrete. The project includes the necessary operational facilities.</p>			
3	PBN1A2004E001	OB-GP-M-0387/2001	MODIFICATION OF THE BUILDING PROJECT FOR THE EXTENSION OF THE EAST SEAWALL
<p>The current port was planned in the late nineteen-sixties and early seventies, and its physical layout is very similar to that of the late eighties, which then handled some 18 million Tn. Therefore it should be noted that current traffic forecasts, which in 2000 were more than 30 million Tn, are way over the most optimistic figures of the 1989 Master Plan. The Port of Barcelona is currently clearly suffering from a lack of space, because of the delay in the execution of the works foreseen in the Master Plan, caused by the laborious administrative processes required by a project of this scale, and also the notable increase in traffic over the last few years, especially in containers, vehicles and tourist cruisers, a sector in which Barcelona is currently the leading port in the Mediterranean.</p> <p>The project consists of the construction of a sloping seawall 1 986 m long with a type section, subsequent to prior dredging of 3m, made up of solid concrete blocks of 50 Tn, resting on successive layers of rockpile with an emerging wall of solid concrete crowned at a height of +12.00.</p>			
4	PBN1A2005E001	OB-GP-M-0388/2001	MODIFICATION OF THE BUILDING PROJECT FOR THE ENLARGEMENT OF THE SOUTH SEAWALL STRETCHES 1 AND 2
<p>The current port was planned in the late nineteen-sixties and early seventies, and its physical layout is very similar to that of the late eighties, which then handled some 18 million Tn. Therefore it should be noted that current traffic forecasts, which in 2000 were more than 30 million Tn, are way over the most optimistic figures of the 1989 Master Plan. The Port of Barcelona is currently clearly suffering from a lack of space, because of the delay in the execution of the works foreseen in the Master Plan, caused by the laborious administrative processes required by a project of this scale, and also the notable increase in traffic over the last few years, especially in containers, vehicles and tourist cruisers, a sector in which Barcelona is currently the leading port in the Mediterranean.</p> <p>The project involves the building of a seawall with a total length of 3 700 m, divided into two stretches: Stretch 1 is a sloping seawall 2 000 m long, made up of solid concrete blocks of up to 60 tonnes, resting on successive layers of rockpile with an emerging wall of solid concrete and crowned with an emerging solid concrete wall. Stretch 2 is vertical seawall 1 700 m long made up concrete caissons measuring 35 x 24 x 17m. These caissons rest upon a banked stone rockpile, after prior dredging of the area, with an emerging wall of reinforced concrete. The project also includes the building of enclosures annexed to the South Seawall, covering an area of 50 Ha, achieved by building a breakwater parallel to the coast and closures perpendicular to it, made up of rockpile, making it possible to fill with material.</p>			
5	PBN1A2010E001	OB-GP-P-0389/2001	ENLARGEMENT OF THE SOUTH SEAWALL STRETCH 3

Order	PPE	APB	Title
			<p>The current port was planned in the late nineteen-sixties and early seventies, and its physical layout is very similar to that of the late eighties, which then handled some 18 million Tn. Therefore it should be noted that current traffic forecasts, which in 2000 were more than 30 million Tn, are way over the most optimistic figures of the 1989 Master Plan. The Port of Barcelona is currently clearly suffering from a lack of space, because of the delay in the execution of the works foreseen in the Master Plan, caused by the laborious administrative processes required by a project of this scale, and also the huge increase in traffic over the last few years, especially in containers, vehicles and tourist cruisers, a sector in which Barcelona is currently the leading port in the Mediterranean.</p> <p>This consists of the building of a sloping breakwater with a total length of 1 126 m corresponding to the end of the South Seawall, with a curved line, followed by a straight stretch and an outer wall perpendicular to this. The outer layer is made up of 40-Tn solid concrete blocks resting upon successive layers of rockpile with an emerging wall of solid concrete crowned at a height of +11.00.</p>
6	PBN1E2006E001	OB-GP-P-0427/2001	<p>RAIL LOOP IN FORMER TIR AREA</p> <p>The Ministry of Public Works has planned to build the branch line into the Port of Barcelona directly from the terminal at CAN TUNIS. To do this, it is necessary to connect this branch both to the rail access to the South Wharf and to the access to the Princep d'Espanya Wharf.</p> <p>This project involves building a line 1 102.26 m long, of which 960 m correspond to track resting on concrete, and the rest on ballast. This will be a double gauge (RENFE and European) line with VIC-54 type tracks. It includes protection of level crossings using horizontal, vertical, light and sound S.L.A. signals, demolishing and rebuilding the fence marking out the leasehold and the replacement of the services affected.</p>
7	PBN1E1025E001	OB-GP-P-0469/2004	<p>LANE DOUBLING ON "3" STREET</p> <p>The opening of the new course of the River Llobregat in summer 2004 required a rethinking of the road accesses close to the Port, the ZAL and the Free Zone. These actions involved doubling the lanes on "3" Street of the Free Zone Industrial Estate to allow access to the port from the Ronda Litoral ring road.</p> <p>The project involved putting up horizontal and vertical signposting in "3" Street, making adjustments to the kerbs and other small actions in the intersections of the streets connecting along "3".</p>
8	PBN1B4013E001	OB-GP-P-0498/2004	<p>URBAN DEVELOPMENT OF THE CRUISER TERMINAL</p> <p>The increase in large cruiser traffic berthing at the Adossat wharf has made it necessary to adapt the quayside to turn it into a cruiser terminal.</p> <p>This involves the urban development of approximately 1 360 m of the Adossat wharf from the North entrance mouth. The development works, very similar to the quality of the work carried out on the Sant Bertran and Barcelona wharves, involve building a central walkway and pavements, shelters in waiting areas and paving and fencing off of the apron. This also includes digging ditches for services, drainage, lighting, tree-planting, irrigation network, benches and signposting.</p>
9	PBN1A9008E001	OB-GP-P-0520/2005	<p>ADDITIONAL WORKS OF THE 2ND MOD. OF THE REDEVELOPMENT PROJECT OF THE MONTJUÏC LIGHTHOUSE</p> <p>The aim of this works project is to build a road connecting the Montjuïc Lighthouse to the urban road network. This road will be designed to allow car and coach traffic in both directions. It must therefore have two lanes 3.5 metres wide and plans should be studied for the inclusion of a hard shoulder with a pavement to enable pedestrian access. The maximum desirable slope of the stretch of road is calculated at 12%. Nonetheless, in certain specific stretches a gradient of up to 14% may be allowed. The minimum radius is set at 40 metres, bearing in mind that this is an urban project.</p> <p>Another facet of the Montjuïc Lighthouse redevelopment project is the need to improve accessibility, bearing in mind that the current access road is steep and winding, and also crosses a railway line at a level crossing with no barrier.</p>
10	PBN1A9008E001	OB-GP-P-0524/2005	<p>FITTING OUT OF THE LORRY PARKING AREA</p> <p>New land access are currently being planned for the enlargement area of the Port of Barcelona. The proposed new road system involves building a branch that will come off the Cinturón Litoral ringroad and run along the left bank of the river Llobregat to connect the ZAL and the south area of the Port. The additional traffic expected as a result justifies the need to provide this area with a provisional lorry park. It is therefore considered advisable to reserve and fit out an area of approximately 7 Ha. at the end of the old course of the river Llobregat.</p> <p>The aim of the work is to prepare an area of approximately 7 Ha. at the end of the old course of the river Llobregat as a provisional lorry parking area.</p>
11	PBN1A4022E001	OB-GP-P-0529/2006	<p>MODIFIED MOVEMENT OF PRE-LOADED MATERIALS - PHASE 1 - PRAT TERMINAL</p> <p>The Prat terminal will be filled by hydraulic methods, which means that they must be compacted before the surfacing work takes place. Given that the terminal covers 93 Ha. it was decided for financial reasons to preload one area and to move this preloaded material in slabs of 300 000 m³.</p> <p>The aim of the project is to plan the pre-loading earthworks in the area of the spaces associated to the Prat wharf. The area concerned covers about 93 Hectares and will be filled with dredged sand.</p>

Order	PPE	APB	Title
12	PBN1B4001E001	OB-GP-P-0548/2006	<p>ADDITIONAL WORKS TO THE PORT CONTROL TOWER</p> <p>After work had begun, in the light of talks with the Fire Chief of the City Council of Barcelona, it was decided to install an automatic sprinkler system in the top three storeys of the tower in addition to the original fire protection measures agreed previously, and a dry fire-fighting hydrant system from the foot of the tower to the upper floors.</p> <p>This project aims to define the installation of a fine sprinkler system and a dry fire hydrant. The installation of these elements, and that of the smoke detection and extinguisher network already covered in the original project, will adequately define the fire protection system of the tower building.</p>
13	PBN1A2018E001	OB-GP-P-0463/2004	<p>COASTAL CORRECTIVE MEASURES PHASE 3 D (CREATION OF A WET AREA)</p> <p>One of the conditions laid down in the Environmental Impact Declaration of the Port of Barcelona's Master Plan was to create a beach along the right bank of the new mouth of the River Llobregat by dumping a total of 3 500 000 m³ of sand there. The inside part of the new beach, in the area between the point where the breakwater starts and the high water embankment on the right bank of the new mouth of the River Llobregat is being planned as a wet area, which will make up for the loss of the La Podrida lagoon. This wet area will be covered by the corresponding project, to be drawn up in light of the project on wet areas in the modified project of the diversion of the River Llobregat, and will incorporate the necessary measures to guarantee the conservation of the natural and artificial ecosystems of the river's flood plain.</p> <p>The works involve creating a wet area on the new beach generated by the Port of Barcelona, also part of the coastal corrective measures. The ground area is triangular and will stretch 1700 metres along the coastline covering an area of 50 Ha. The area will be landscaped in such a way as to create dune and lagoon systems, drainage channels and the planting of grasses, bushes and trees to recreate different communities planned according to the hydrological characteristics of the substrate of each area.</p>
14	PBN1A3015E001	OB-GP-P-0493/2004	<p>BERTHING WHARF OF THE PILOTS' CORPORATION</p> <p>The Port of Barcelona's Master Plan is part of the Delta Plan, which in its turn covers a series of spatial actions, notably the building of the East and South breakwaters, as well as a new space for container traffic which will double the Port's operative area. This major port enlargement to the south will mean a considerable increase in Piloting operations, which will also shift southwards. In light of new developments, Barcelona Port Authority has planned a new location for the Pilots' Corporation. The area chosen for its new base is at the far northeast end of the inflammables peninsula.</p> <p>This project covers the works necessary to build a berthing wharf adjoined to the breakwater protecting the Inflammables wharf. The following works are associated to the building of the wharf: a) Building a banked stone rockpile crowned between -3.50 and -5.00 that will serve as the foundation for building the wharf. b.) Building the berthing wharf consisting of a solid concrete structure with with an emerging protecting wall on the outer face</p>
15	PBN1B2001C001	OB-GP-P-0537/2006	<p>TERRACE FILLING AND PRE-LOADING TO CONSOLIDATE THE REDEVELOPMENT OF THE COSTA WHARF</p> <p>A new wharf front has recently been built on a line parallel to the current Costa wharf. This new wharf is made of prefabricated reinforced concrete caissons in the two areas touching upon the neighbouring wharves, Ponent Sud and Contradic Nord. The solution used involves a submerged concrete wall. The works project also included treating the extrados of the wharf with a layer of granular material.</p> <p>The project includes general filling up to a height of +2 over the wharf that created between the old line of the Costa wharf and the new one to form a terrace. To gain time in consolidating filling, earth will be pre-loaded up to a height of +6, with an average time estimate of 4 months. It also includes the extension of a spillway located at the south end of the current wharf, and of an 800 mm. diameter collector approximately in the middle of the wharf. During the filling and pre-loading operations, mud will be extracted and spread on the terrace areas to dry.</p>
16	PBN1A9017E001	OB-GP-P-0543/2006	<p>STRENGTHENING OF THE BERTHING SYSTEM ON ADOSSAT WHARF</p> <p>The current mooring posts on the Adossat wharf have lost part of their resistance to pull due to rusting of their heads. In any case, this resistance is fairly small (50Tn) for the type of vessels currently using this wharf.</p> <p>The project involved replacing the mooring posts and their deadman anchors with others with a greater pull capacity. 150Tn and 100Tn resistance mooring posts have been installed according to the areas involved.</p>
17	PBN1A1001E001	OB-GP-P-0549/2006	<p>DUMPING SAND ONTO THE BEACH SOUTH OF THE LLOBREGAT (1ST LOAD)</p> <p>The Environmental Impact Declaration on the Port of Barcelona's Master Plan, made public on 10 July 2000, states that sand will periodically be taken equivalent to the net average annual transport calculated in this area (annual maximum of 480,000 m³) to mitigate the erosion that will occur in the stretch of coast to the south of the run-off from the La Ricarda lagoon.</p>

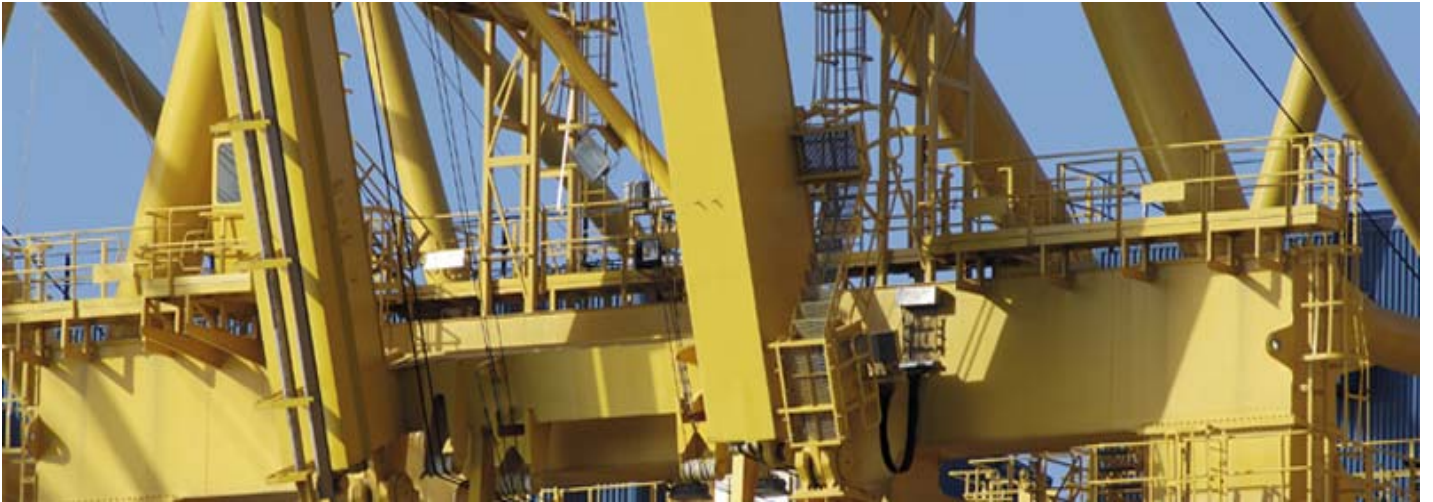

Order	PPE	APB	Title
			The works consist of dumping 489,812 m ³ sand to be dredged from near the Port Ginesta seawall, which will be dumped along a stretch of coast in municipality of El Prat de Llobregat (Barcelona), south of the seawall on the right bank of the diverted River Llobregat.
18	PBN1A9015E001	OB-GP-P-0551/2006	<p>QUARRY BALLAST PROVIDED FOR EMBANKMENTS OR TERRACES IN PRAT WHARF TERMINAL</p> <p>In order to complete Phase 1 of the Prat Wharf Terminal, it is necessary to build a series of embankments to hold a large amount of dredging material which will serve as preloading. Up to now these embankments have been built using granular material that was supplied at too slow a rate given the characteristics of the foundation material on which the structure was being built. That is why it has been considered vital to use quarry ballast to build such embankments, which will ensure that the deadlines can be met.</p> <p>The aim of this project is to provide quarry ballast to build embankments and terraces on the new Prat Terminal. The minimum estimated amount to dump will be 125,000 Tn.</p>
19	PBN1A2037E001	OB-GP-P-0553/2007	<p>GEOTECHNICAL SURVEYS CAMPAIGN ON PRAT WHARF</p> <p>As a result of part of the Prat Wharf breaking during building work, the APB Management Board, meeting on 31 January 2007, agreed a series of measures, including some short-term actions listed in section two of said agreements, without prejudice to any other alternative or complementary actions or measures that may be taken.</p> <p>A call for tenders was launched to conduct an exhaustive investigation of the geotechnical characteristics of the subsoil in the Prat Wharf to determine the possible causes of the breakage that occurred on the wharf.</p>
20	PBN1A3031Z001	OB-GP-P-0563/2007	<p>PLACING MEASURING INSTRUMENTS IN THE CAISSONS OF THE PRAT WHARF</p> <p>As a result of part of the Prat Wharf breaking during building work, the APB Management Board, meeting on 31 January 2007, agreed a series of measures, including some short-term actions listed in section two of said agreements, without prejudice to any other alternative or complementary actions or measures that may be taken.</p> <p>The work involved here concerns placing measuring instruments and taking readings to check each caisson in the Prat Wharf Phase 1 to determine the causes of the incident in which the Prat Wharf broke. The actions outlined require technical equipment (cell chains) to be installed immediately in order to provide real-time measurements.</p>
21	PBN1A4024E001	OB-GP-P-0566/2007	<p>PROJECT FOR THE MOVEMENT OF PRE-LOADED MATERIALS (ACTION 2). PRAT TERMINAL (PRE-LOADING PRAT WHARF. PHASE 2)</p> <p>As a result of part of the Prat Wharf breaking during building work, the APB Management Board, meeting on 31 January 2007, agreed a series of measures, including some short-term actions listed in section two of said agreements, without prejudice to any other alternative or complementary actions or measures that may be taken.</p> <p>The aim of the project is to plan the pre-loading earthworks in the area of the spaces associated to the Prat wharf.</p>
22	PBN1A3004E001	OB-GP-P-0576/2007	<p>ADDITIONAL WORKS TO THE URBAN DEVELOPMENT OF THE CRUISER TERMINAL</p> <p>This project concerns the urban development of Terminals B, C and D with a similar quality to the San Beltran and Barcelona wharves.</p> <p>The work covered by the complementary project is as follows: a) Building a new 100 m shelter in the taxi waiting area of Terminal D. b.) Changing the development between Terminals A and B. This involves the 45 m. of the central avenue on the north side of Terminal B, removing the shelter and railings to be re-installed on the terrace of Terminal C, demolishing the central avenue, refurbishing the new vehicle access to the terrace on Terminal B and withdrawing the lighting tower also affected by the building of Terminal A. As a result of the above, the other 30 m. lighting tower will be located in the centre of the terrace, thus increasing the number and power of the projectors. There will be 10 such 1000 w projectors to light the entire terrace. c.) Installing new elements to separate lorry traffic on the ring road and car traffic in the cruiser lanes, as well as new raised pedestrian crossings. These elements consist of 40 x 40 x 60 cm prismatic granite slabs embedded 20 cm into the road. They will also bear the APB logo.</p>
23	PBN1A2042E001	OB-GP-P-0577/2007	<p>GEOTECHNICAL SURVEYS CAMPAIGN ON ADOSSAT WHARF AND EXTENSION OF SOUTH WHARF</p>

Order	PPE	APB	Title
			<p>The Port of Barcelona's Master Plan is part of the Delta Plan, which in its turn covers a series of spatial actions, notably the building of the East and South breakwaters. Two of the actions included in the Master Plan are the building of a wharf attached to the East breakwater and the extension of the South wharf. The reorganisation of the port container terminals makes it necessary to build a new 600-metre extension to the Adossat wharf. It is also necessary to relocate the shipyards in the City-Port area and extend and enlarge the South wharf areas. Barcelona Port Authority has decided to carry out a geotechnical survey, which is necessary in order to draw up the different projects and correctly scale the foundations for the containing works (wharves) and ensure the stability of the filling materials.</p> <p>The work consists of an exhaustive survey of the geotechnical characteristics of the subsoil on the Adossat and South wharves to plan the new wharves, and the facilities for the future Synthesis Shipyard. Description of the work to be done: 1.- Design, planning and control of the geotechnical survey work (field and laboratory tests). 2.- Geotechnical survey of the characterisation of the soil, the scope of which is approximately as presented in this document. 3.- Interpreting results. 4.- Coordination work. 5.- Drafting interim and final reports on the work performed. 6.- Creation of an interactive GIS. 7.- Storage and custody of the samples and markers obtained.</p>
24	PBN1A3032A001	OB-GP-P-0578/2007	<p>INSTALLATION OF GEODRAINS IN PRAT WHARF</p> <p>The installation of geodrains on the Prat wharf is a vital prior operation for Phase 2 of the movement of pre-loaded materials on the Prat wharf to be able to guarantee the correct drainage and consolidation of the terraces. All of these actions are urgent because of the commitments acquired by the Port Authority with the winning tenderer of the Prat Terminal leaseholding.</p> <p>The operation to instal 1 200 Km. of geodrains at an average depth of 15 metres is a required prior step to Phase 2 of the Movement of Preloading Materials to guarantee proper drainage and consolidation of the terraces.</p>
25	PBN1E2035E001	OB-GP-P-0581/2007	<p>ENLARGEMENT OF THE RAIL TERMINAL ON PRINCEP D'ESPANYA AND DEVELOPING HARD SHOULDER STRETCH 6</p> <p>To respond to operational needs, work must take place on the "Enlargement of the Princep d'Espanya Rail Terminal" pursuant to the letter sent by the Sub-Directorate General for Operation and Planning.</p> <p>The work will involve three linear actions in the area behind the Princep d'Espanya wharf. The first is the installation of a new 800-metre stretch of mixed rail line. The second involves adapting an auxiliary road adjacent to a stretch of the current railway track required for correct vehicle loading and unloading operations. The stretch in question, which is 450 metres long, lies between the access to "Autoterminal" and "Sal Costa". Finally, the third action involves building a 700-metre lane for queuing vehicles along Stretch 6 between the DAMEX roundabout and Gate 29.</p>
26	PBN1A4046E001	OB-GP-P-0582/2007	<p>DRAINAGE LAYER ON PRAT WHARF TERRACE. PHASE 2</p> <p>To guarantee and speed up the consolidation of the Prat wharf, a drainage layer must be laid to allow access of machinery required to work and remove water flowing from the geodrains.</p> <p>The main activities of the work consist of: 1) Laying a non-woven geotextile that will only allow water to pass through and to keep out any soil particles. 2) Transporting and spreading granular material within the work site to build up the drainage layer. 3) Building a network of ditches using drainage tubes to channel the collected water into wells. 4) Digging wells to collect the water. 5) Laying a non-woven geotextile to avoid contaminating the drainage layer.</p>
27	PBN1A3004E003	OB-GP-P-0591/2007	<p>MOVEMENT OF MATERIAL FROM THE EXTRADOS OF PRAT WHARF PHASE 1 TO PRECINCTS IN THE BACK AREA</p> <p>The Port of Barcelona's pressing need for new areas for port uses means that a new container terminal must be built to meet existing demand.</p> <p>This consists of moving material from the extrados of Prat Wharf Phase 1 to precincts in the back area.</p>
28	PBN1H9006E001	OB-GP-P-0595/2007	<p>FITTING OUT OF OFFICES IN THE WTC</p> <p>Areas must be prepared for the future move of the APB staff to the World Trade Center building.</p> <p>This involves fitting out the future offices of the APB in the WTC building.</p>
29	PBN1A4047E001	OB-GP-P-0596/2007	<p>SUPPLYING GRANULAR MATERIAL FROM RECYCLED BUILDING WASTE</p>

Order	PPE	APB	Title
-------	-----	-----	-------

Following the Prat wharf collapse last 1 January 2007, the Port of Barcelona has had to adapt its building plans to be able to deliver the completed terminal in the shortest time possible. One of the projects to be performed as soon as possible is the creation of a drainage layer on the terrace of the Part wharf to allow access of heavy plant, and the building of vertical drains to allow horizontal drainage during the consolidation process. One of the materials to be used to form the drainage layer is a selected granular material with a very uneven granulometry. This material can come from recycling of construction materials.

It involves the supply of granulated material from recycled building materials to be used in different works of the Prat Terminal.
